

Kaivulupa.fi

Avoid damages to underground structures by using **kaivulupa.fi** –utility location service

Kaivulupa.fi –utility location service

- increases safety and productivity of all parties
- is cost-effective and always available through your web browser
- gives diggers the required information about networks around the excavation area
- gives diggers the required and precise information about underground utility structures
- includes the functions to order and supervise cable marking at the excavation site

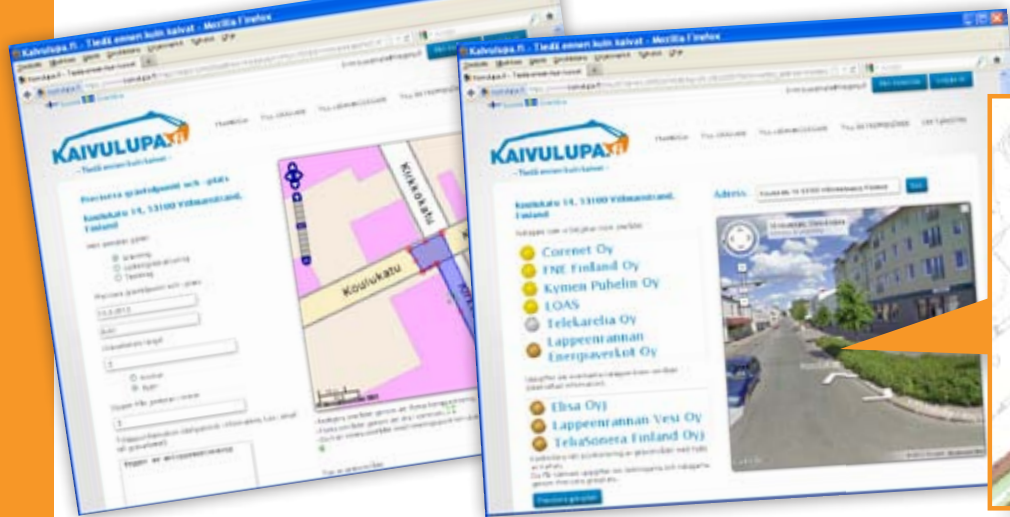

Network owners have three alternative service levels: contact information level (Bronze), self service level (Silver) or full service level (Gold). Please contact us for further information of the contents of each service level.

Network owner, sign a profitable service contract and direct all inquiries of your underground structures to the kaivulupa.fi service.

Kaivulupa.fi is available 24/7

Support by Keypro professionals is available weekdays between 7.00–17.00 at phone **0800-133 544**.

Kaivulupa.fi masters and delivers information about underground structures through an easy to use web site – every hour, every day

The kaivulupa.fi service, targeted towards diggers, constructors, utility planners, cable markers, network owners, is available through your web browser no matter where you are. You have a vast database of utility networks at your hands.

To enhance your productivity you have the following powerful tools at your disposal:

- Address search
- Map and street view of the excavation site
- Contact information of all utilities at the site
- Precise drawing of the excavation area on the map
- One click utility location document for the excavation site
- Ordering of cable marking (covers also emergencies)
- Reporting of utility location inquiries
- Interface to network inventory
- Interface order management systems

By interfacing a Novatron machine control system* you will gain the following benefits:

- Click and discover utilities at the site directly from the excavator
- Utility structures can be seen on the screen of the machine control system along with the bucket
- You can measure locations of utility structures in 3D and deliver the measurements to the client through the kaivulupa.fi service
